DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 6, 8, 29 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 112

2. Claims 6, 8, 19, 29 and 41 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 6 and claim 29 are rejected because it claims "wherein the substrate ...consists of a conductive material" but claims 1 and claim 20 from which claims 6 and 29 depend from claims that the substrate is selected from a conductive polymer film, a polymer film deposited with a metal and a polymer film incorporated with a conductive agent. Firstly, applicants argued that " a conductive polymer film" would not have a conductive material but because of its makeup it would be conductive. Secondly, claim 1 already cites " a polymer film incorporated with a conductive agent so it is unclear what claim 6 adds to this component of claim 1. Thirdly, if a conductive material is added to the negative electrode than it is unclear what the difference is between a conductive polymer film with a conductive material and a polymer film incorporated with a conductive agent and a conductive material.

Art Unit: 1745

Claim 8 is rejected because the substrate could comprise a conductive polymer film or a polymer film incorporated with a conductive agent so it is unclear how the phrase "wherein the metal is copper or nickel" further limits claim 1.

Claim 19 and 41 are rejected because it is unclear what is meant by "compressing a lithium foil thereon". Also, what /where is the lithium foil on.

Allowable Subject Matter

3. Claims 1-5, 14-18, 20-21, 23-24, 26-28, 33, 37-40, 47, 63, 65 are allowed.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

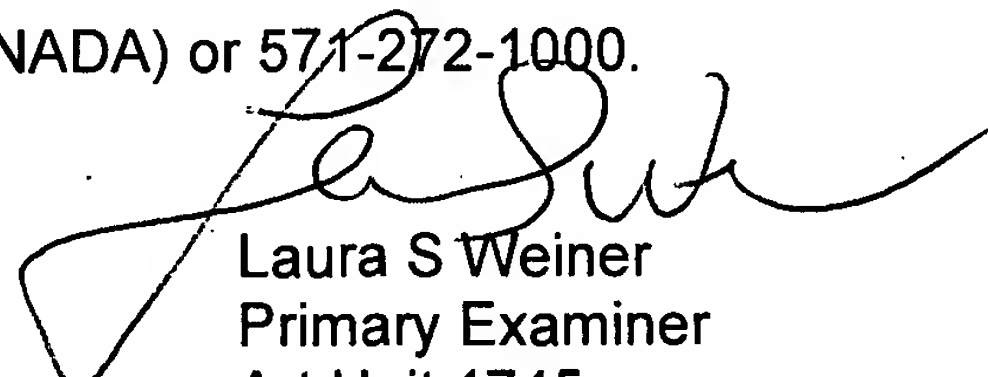

Ohsawa et al. (5,162,178) teaches a negative electrode for a secondary battery having a current collector with an uneven rough surface made of a metal and a lithium metal thereon.
